667B, Great South Road, Penrose, Auckland 1061

# STABILISE TODAY. REBUILD TOMORROW.

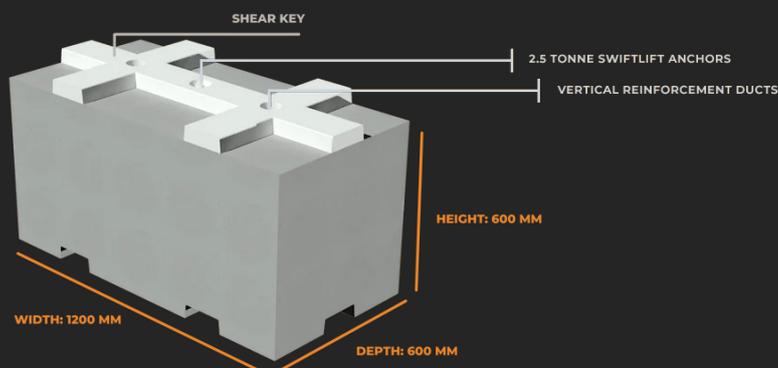

When slips or slope failures impact infrastructure, the priority is clear: stabilise the site, restore access, and keep projects moving. Interbloc is an engineered gravity and geogrid retaining wall system designed specifically for remediation and recovery works across roading, infrastructure throughout New Zealand. With stock prioritised and available nationally, supply lead time doesn't have to delay your programme.

Whether supporting NZTA corridors, council assets, subdivisions or private infrastructure, Interbloc provides practical, engineered solutions for slope stabilisation and landslide mitigation. The modular, heavy-duty concrete block system suits temporary or permanent works.

## WHY PROJECT TEAMS CHOOSE INTERBLOC

- ✓ Local stock available for immediate dispatch, reducing procurement risk when time matters.
- ✓ Modular interlocking system enables faster installation with smaller crews and reduced hours.
- ✓ Fully deconstructable and reusable, ideal for staged or evolving site conditions.
- ✓ Full engineering support provided, access to Envirocalc.
- ✓ National supply capability with local technical support across New Zealand.

## THE CORE SYSTEM OF INTERBLOC

### VERTICAL REINFORCEMENT DUCTS

Integrated vertical ducts allow for reinforcement, increasing structural strength and overall stability.

### SHEAR KEY

The shear key transfers shear forces between blocks while allowing overturning forces to be resisted by the block's own weight.

### LIFTING PIN

A built-in lifting pin enables safe, efficient handling and installation on site.
